

Chronic Sinusitis - What to Look For

We've all felt the pain of a **sinus infection**. The throbbing pressure, postnasal drip and congestion are just a few of the irritating symptoms in which we're all familiar with. Many people get over their infection within a week or so, but for some of us it never stops. That week becomes a month, sometimes lengthier, and it seems as soon as they get better it comes right back. This is known as a **chronic sinus** infection, although the signs are similar to a severe sinus infection, they could be significantly worse. In some cases they can lead to serious issues when they are not treated properly. Let us take a look at some of the differences between an acute infection and a longterm infection.

Acute Sinusitis Vs Chronic Sinusitis

As mentioned before, an **acute sinus** infection will last 7 to 10 days, and is generally triggered by a cold or the flu. Acute sinusitis is often the result of a cold or the flu, any time germs become trapped inside nasal passages and sinus cavities. Thick greenish-yellow release is a sign of an acute sinus infection.

- **chronic sinus infection** could last up to 12 months or even longer.
- This is usually caused by a pre-existing condition such as allergic rhinitis, or repeated acute infections.
- Signs and symptoms are typically significantly more severe in the case of a chronic sinus infection, and they include:

Clear, thin discharge - Extreme pressure and congestion - Headaches, especially when leaning forward or bending more than - Halitosis (bad breath) - Pain inside the teeth and jaw - Postnasal drip

Treatment is Essential

When you are looking at persistent sinusitis, therapy is essential as a result of the risk of the infection spreading to other parts of the head and body. The infection can spread to the ears, producing temporary (and sometimes permanent) hearing loss as well as the eyes which could lead to temporary or permanent perspective loss. In extreme cases, chlamydia can spread to the brain and spinal cord, which may always be fatal.

*“ While no one wants to live with the pain and stress associated with chronic sinusitis, still must be said that you seek medical assistance immediately to direct you towards fighting the infection. Your doctor can prescribe you medication, or in some cases they will send you to a good ENT (Ear, Nasal and also Throat doctor) to receive **sinus surgery**. Other options for treatment.*

While both oral medications and sinus surgery have their advantages, they are not always the most effective in eliminating infection especially in the case of chronic sinusitis. Medications are intravenous, meaning that they will work through the blood. Due to the limited blood flow to the sinus cavities, it is not easy for medicine to be able to reach the contaminated muscle. Nose surgery provides immediate relief; however it does not battle the infection itself, making you at risk of recurrent infections.

Many pharmacies have been making waves **treating sinusitis** along with other **sinus problems** with topical ointment treatments in which are really effective in fighting infection as well as preventing future outbreaks. One pharmacy in particular, Sinus Dynamics, provides three different treatments as well as specially compounded medications that may be prescribed by your doctor, and delivered to your own doorstep within 3 business days. These treatments not only help remove the need for surgery, nevertheless they reduce the risk of antibiotic resistance. The nebulized treatments they feature have shown a great 82.9% effectiveness, with patients offering a "good or excellent" response (according to a medical study).

You are suffering from chronic sinusitis and are interested in the treatment options in which Sinus Characteristics gives, please visit all of them online at <http://www.sinusdynamics.com/> or perhaps by phone all of them, toll-free, from 1-877-447-4276.
